

FOR IMMEDIATE RELEASE

Zultys' extends its product to the Enterprise and Global markets

Boosts MXgroup™ distributed Site Support by 400%

-Innovative approach supports IP telephony and Unified Communications Services for up to 128 locations -

Sunnyvale, CA, October 26, 2009 – ZULTYS INC., a leading manufacturer of secure and Enterprise class IP PBX equipment for the mid and Enterprise market, has further extended the ideal Unified Communication Enterprise solution by delivering 99.999% reliability and failover to 128 MXgroup™ sites. No matter how large your Enterprise, the MX solution from Zultys enables companies to deploy seamless organization-wide IP telephony and Unified Communications services to up to 128 locations – a 400% increase over previous capabilities. Knowing your entire multisite network has distributed secure processing without a single point of failure within the LAN or WAN is the peace of mind that differentiates ZULTYS from other solutions.

MXgroup™ is a software option for ZULTYS Enterprise IP PBX products that allows multiple MX250 and MX30 systems to be interconnected to form a single virtual unified communications system, making separate offices appear as a single entity and managed from 1 interface. Each MXgroup can support up to 10,000 users at multiple locations and provides global presence, free inter-site calls, secure communications and interactive collaboration across the entire group, regardless of where they are located – whether in the same building or in another country. Each location is independent of issues that may affect others, providing system redundancy and rapid disaster recovery and failover.

“We have seen demand for increased site coverage for IP telephony and Unified Communications services beyond the 32 locations we originally could support,” said Vladimir Movshovich, CTO for ZULTYS. “It was very important for us to keep to our “all-in-one” design approach. So we instead developed a new software solution to expand MXgroup capacity without requiring any additional hardware. ZULTYS now provides the broadest service coverage of any company supporting the mid and Enterprise market.”

MXgroup enables:

- Secure Enterprise-wide Unified Communications
- Global Presence and Single Number Contact
- Seamless Roaming Between Sites
- Unique Distributed Architecture
- Least cost call routing

- Survivability and Disaster Recovery
- Easy Set-up and Administration
- Supports up to 10,000 users

About Zultys

ZULTYS, INC. is a leading manufacturer of secure, enterprise class IP PBX telephone systems that allows you to do a LOT more with less. As the most feature rich platform in the industry, we bring about a dependable IP PBX Phone switch, that is easy to deploy, use, manage and scale. It is pre-loaded with attributes out of the box, such as Soft phone, Find me/Follow me, Presence, Unified Messaging, Visual Voicemail, Secure Chat/IM, Tele-worker support with NO VPNs needed, Fax Server, Mobile client, Conferencing, Twinning, Inbound call center, IVR and more. Since 2001 we have been built on SIP OPEN STANDARDS (not open source) and are natively supporting SIP desktop and cordless phones, as well as the ability to interface with SIP Trunks (with no licensing or external gateways and other point of failures), as well as T1/E1/PRI, analog trunks and more, and all this in 1 highly available 1 appliance. Our thin (30MB) desktop software makes it possible to run these applications on a MAC, Linux or PC (64 or 32 bit), on a Terminal Server or Citrix , all WITHOUT requiring expensive and cumbersome external servers like most of our competitors do. In essence, we do much more out of our 2U secure Rack Mountable appliance, than most of our competitors can do with an entire rack of servers, all at a compelling price point that easily scales to 128 locations and 10,000 users, with superb redundancy and a 99.999% high availability thanks to our patented distributed processing method, and automatic and quick failover across LANs or WANs.
