

Skype for Business Application Integration

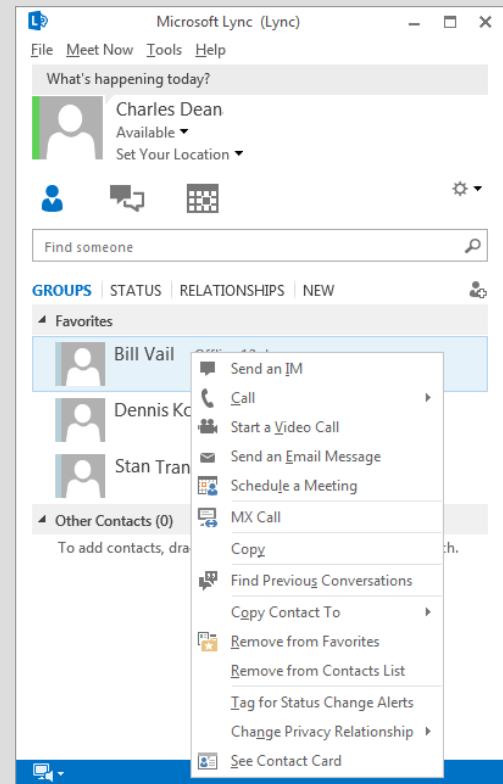

When it comes to deploying the new phone system in the office, many workers are reticent to give up the tools they are familiar with. The popularity of the Skype means that many people continue using it even with new communication tools in place. To solve this problem, Zultys created a Skype for Business Integration plug-in. This is an optional add-on for the Zultys Flex Communicator. Zultys Skype for Business makes it easy for your teams to access Zultys enterprise-grade communications features without ever leaving their Microsoft application, simplifying workflow and increasing productivity.

FEATURES:

- Exchange Presence information between Zultys' ZAC unified communication client and Skype for Business Client
- Initiate calls via the MX phone system from Skype for Business client for smoother integration

REQUIREMENTS:

- Lync 2013/Skype for Business client are installed and properly configured on the client PC. The Skype for Business Server can be a local server onsite or the Office 365 cloud based solution.
- Flex Communicator 3.0.6 and the Zultys Lync plug-in must be installed on the client PC.
